Subject: **Quarterly Status Report No. 10 - Offsite Area**
Former Kop-Flex Facility Site, Hanover, Maryland

Dear Richelle:

On behalf of EMERSUB 16 LLC, a subsidiary of Emerson Electric Co., WSP USA Inc. (WSP) is submitting this quarterly status report describing the investigation and remediation activities conducted in the first quarter 2019 in the offsite portion of the Former Kop-Flex Facility Site in Hanover, Maryland. The report also describes the activities planned for the second quarter of 2019. In addition to this electronic version, a hard copy of the status report is being submitted to the Maryland Department of Environment under separate cover.

If you have any questions, please do not hesitate to contact us at 703-709-6500.

Kind regards,

Robert E. Johnson

QUARTERLY STATUS REPORT NO. 10 – OFFSITE AREA

FORMER KOP-FLEX FACILITY SITE

January 2019 THROUGH March 2019

1.0 Offsite Activities Conducted During January 2019 through March 2019

1.1 Residential Well Sampling

- Pursuant to MDE's request, water samples were collected from the residential well at 1227 Old Camp Meade Road (Figure 1) on the following dates during the reporting period:
  - January 8, 2019
  - February 19, 2019
  - March 7, 2019

  Historical analytical results, including those for the first quarter 2019 samples, are summarized in Table 1. Copies of the certified laboratory analytical reports for the January 2019 through March 2019 sampling events are included in Enclosure A.
- Site-related constituents of concern (COCs) were detected in both the untreated water sample and water treated by the mixed-media filter tanks containing granular activated carbon, with one chemical – 1,1-dichloroethene (DCE) – present at a level above the applicable groundwater quality criteria (Table 1). In the pre-treatment samples, concentrations of 1,1-DCE ranged from 6.2 micrograms per liter (µg/l) to 7.1 µg/l, while 1,4-dioxane was present at levels between 1.8 µg/l and 2.7 µg/l. The post-treatment water samples for the three events had concentrations of 1,1-DCE ranging from below the reporting limit of 0.5 µg/l to 3.9 µg/l, and 1,4-dioxane concentrations similar to the levels detected in the untreated water (1.6 µg/l to 2.8 µg/l). The data for the first quarter 2019 sampling events indicate a consistent increase in the concentrations of 1,1-DCE and 1,4-dioxane in the untreated water. The levels for these COCs in the treated water samples fluctuate during the same time period. Trace levels (<1 µg/l) of 1,1,1-trichloroethane (TCA) were also detected in both the treated and untreated samples from February 2019 and March 2019. EMERSUB 16 and WSP have communicated the analytical results for these water samples in writing to the homeowner and MDE.

1.2 Residential Water Service Connection for 1227 Old Camp Meade Road

- As mentioned in Quarterly Offsite Status Report No. 9, boundary surveys of the properties along the access road leading from Old Camp Meade Road to the residence at 1227 Old Camp Meade Road were completed in early January 2019. The survey information indicated the access road was located on common property, with use of the property granted to 1227 Old Camp Meade Road and owners of the neighboring residential properties: 1229, 1231 and 1237 Old Camp Meade Road.
- Based on the survey findings, WSP contacted the Anne Arundel County Department of Public Works (DPW) in late January to discuss obtaining an utility easement for the water service line from the water main along Old Camp Meade Road to the residence. During this call, the County DPW indicated that another option for connecting the home would be via the newly installed water main at the intersection of Reece Road and Hideaway Place (Figure 1).

Upon further evaluation of the available options, EMERSUB 16 and WSP have decided to run the connection from the water main on Reece Road. Since the eastern property boundary for 1227 Old Camp Meade Road does not abut the Reece Road right of way, WSP initiated discussions with the owner of the adjoining property at 1229 Old Camp Meade Road with regards to obtaining a utility easement for the water line.

1.3 Offsite Groundwater Sampling

— The offsite monitoring wells installed downgradient (south) of the Site in March and April 2018 were sampled on February 19, 2019, using a disposable passive sampling device (HydraSleeve™) that had been deployed during the previous (November 2018) sampling of each well. The sample retrieval depths for each monitoring well are consistent with those from the previous monitoring events and are provided in the table below. The locations of the monitoring wells are shown in Figure 2.

Well ID	Hydrologic Unit	Depth to Water (ft BGS)	Well Depth (ft BGS)	Well Screen Interval (ft BGS)	Sample Interval (ft BGS)
MW-29D	Confined Lower Patapsco	60.64	151	141-151	146-148.5
MW-30-273	Confined Lower Patapsco	93.10	273	263-273	267-269.5
MW-30-413	Patuxent	130.73	413	403-413	407-409.5
MW-32D	Confined Lower Patapsco	93.79	236	226-236	233-235.5
MW-34D	Confined Lower Patapsco/Arundel Clay Gradational Zone	127.40	385	375-385	379-381.5
MW-36D	Patuxent	134.83	360	350-360	357-359.5

FT = feet; BGS = below ground surface

As part of the monitoring event, WSP also obtained water level measurements from all deep offsite monitoring wells, with the exception of MW-46D on the Verizon property north of the Site. This well was not accessible because a vehicle was parked over the at-grade well cover on the day of the event. The water level collected for all monitoring wells is provided in Table 2.

— A potentiometric surface contour map for the confined portion of the Lower Patapsco aquifer is shown in Figure 2 based on the water levels measured during the sampling event. Evaluation of the hydraulic heads indicates the general direction of groundwater flow in the confined zone is to the south/southeast.

— The February 2019 analytical results for samples from the offsite monitoring wells are summarized in Table 3. A copy of the certified laboratory analytical report for these samples is provided in Enclosure B. Historical groundwater sampling data for the offsite monitoring wells can be found in Table 4.

Concentrations of the primary site-related COCs in the February 2019 samples are shown in Figure 3. For the wells screened in the confined Lower Patapsco aquifer, site-related COCs were only detected in the groundwater sample from MW-30D-273. The concentrations of chlorinated VOCs and 1,4-dioxane in the February 2019 sample are

similar to the levels detected in the previous sampling events (Table 4). No chlorinated VOCs or 1,4-dioxane were detected in the remaining confined Lower Patapsco monitoring wells.

Monitoring well MW-36D installed in the eastern portion of the Harmans Woods neighborhood, and the deeper well (413 feet BGS) at the MW-30D location are screened in the Patuxent aquifer below the Arundel Clay. Consistent with the previous (November 2018) sampling event, no site-related VOCs or 1,4-dioxane were detected in the samples from these wells (Table 4 and Figure 3). These results indicate COCs have not migrated to the deeper aquifer below the Lower Patapsco unit.

- In accordance with the approved Offsite Groundwater Monitoring Plan, EMERSUB 16, LLC submitted a 2018 Offsite Groundwater Monitoring Report to the EPA and MDE on March 27, 2019. The monitoring report presented the results of the quarterly groundwater sampling events conducted during the 2018 calendar year, including an evaluation of the distribution and concentration trends for site-related COCs in the impacted portion of the aquifer system. Information was also provided regarding the installation of the additional offsite groundwater monitoring wells during March and April 2018. The report recommended the abandonment of shallow wells MW-25 and MW-28 because they are no longer part of the offsite monitoring program.

2.0 Planned Offsite Activities for Next Reporting Period (April 2019 Through June 2019)

- Perform semi-annual sampling of the offsite groundwater monitoring wells in the confined portion of the Lower Patapsco aquifer and Patuxent aquifer in late May 2019.
- Continue to conduct monthly monitoring of the untreated and treated water from the residential well at 1227 Old Camp Meade Road.
- Complete surveying and other activities necessary for the preparation, execution and recordation of a utility easement on the property at 1229 Old Camp Meade Road, which will be used for the installation of the public water service connection for the home at 1227 Old Camp Meade Road. A copy of the utility easement will be provided to the county DPW to initiate work on tapping into the Reece Road water main.

3.0 Key Personnel/Facility Changes

During the reporting period, there were no changes to either key project personnel or conditions relevant to the performance of the ongoing work at the site.

a/ U = not detected above the method detection limit; CVOC = chlorinated volatile organic compound.
Bolded values indicate an exceedence of the Groundwater Quality Standards
All sample concentrations in micrograms per liter (µg/l)

a/ U = not detected above the method detection limit; J = estimated concentration between the reporting limit and method detection limit.
Bolded values indicate an exceedence of the Groundwater Quality Standards
All sample concentrations in micrograms per liter (µg/l)
NS = well not sampled
b/ Wells screened in this portion of the Lower Patapsco aquifer were removed from the monitoring program after the May 2018 sampling event.

RE: Project: KOPFLEX
Pace Project No.: 92418503

Dear Eric Johnson:
Enclosed are the analytical results for sample(s) received by the laboratory on February 20, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

QUALIFIERS

Project: KOPFLEX
Pace Project No.: 92418503

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.
